PROFILE

Data & AI Engineer, graduate of Polytech Nantes. I design and industrialise data pipelines and AI solutions, from business requirements through to production deployment and integration into day-to-day operations.

Experience gained in demanding industrial environments (Airbus Atlantic, CETIH), in applied research (RISE Research Institutes of Sweden) and on public-sector digital transformation programmes (Sénégal Numérique): Python and ETL pipelines, industrial time series, data quality and lineage, anomaly detection for predictive maintenance, and generative AI on a RAG architecture.

Seeking a Data Engineer, Data Scientist or ML Engineer role in France.

PROFESSIONAL EXPERIENCE

PROJECT MANAGEMENT OFFICER

December 2025 – Present

Data, AI & Digital Platform Projects

Sénégal Numérique SA · Dakar, Senegal

- Designed and deployed to production a generative AI solution built on Qwen with a RAG architecture: document ingestion, indexing, semantic search and prompt engineering, automating the summarisation of administrative correspondence.
- Led the rollout of a GLPI-based ITSM platform to more than 400 users across a dozen government ministries: functional scoping, user acceptance testing, go-live and change management.
- Coordinated the technical deployment of a Security Operations Center platform: onboarding of five priority applications and definition of the technical prerequisites.
- Managed the systems integrator and acted as the interface between technical teams, business units and institutional stakeholders.
- Ran technical workshops and project governance: tracking of deliverables, dependencies, risks and milestones.

DATA SCIENTIST

September 2022 – September 2024

Industrial Data & Predictive Maintenance

Airbus Atlantic · Nantes, France

- Designed and industrialised Python pipelines for the ingestion and processing of data from aerospace manufacturing systems.
- Structured multivariate time series covering more than 100 industrial variables: cleaning, resampling, missing-value handling and feature engineering.
- Developed anomaly detection models for predictive maintenance, identifying machine drift ahead of failure.
- Implemented data quality, reliability and lineage controls across industrial datasets.
- Translated business requirements into analytical specifications and presented results to production and maintenance teams.
- Integrated analytical workloads into operational processes and industrialised the selected use cases.

DATA ENGINEER

September 2021 – August 2022

ETL & Business Intelligence

CETIH · Machecoul, France

- Built Talend ETL flows as part of a migration from SAP BusinessObjects Data Services.
- Industrialised, maintained and optimised data integration and transformation flows.
- Modelled and prepared data for several business domains.
- Designed and populated Power BI dashboards for business teams.
- Worked with technical and functional teams to ensure the reliability of data and processing.

DATA ANALYST April 2021 – June 2021

Explainable AI & Data Visualization

RISE Research Institutes of Sweden · Stockholm, Sweden

- Built an interactive web demonstrator in Python and Plotly for exploring Explainable AI models.
- Designed visualisations making model outputs interpretable and usable by non-specialist audiences.
- Communicated complex scientific results to wider audiences.
- Collaborated with research teams and academic partners, in English.

SKILLS

Data Engineering: Python · SQL · Talend · Airflow · ETL/ELT · Data pipelines · PostgreSQL · Data modelling · Data quality · Time series

Artificial Intelligence: Machine learning · Anomaly detection · Predictive maintenance · LLMs · RAG · Prompt engineering · Explainable AI

Cloud & Industrialisation: AWS · Docker · Git · Workload orchestration · Pipeline industrialisation · Data lineage

Business Intelligence: Power BI · Tableau · Plotly · Reporting · Data visualisation

Data Project Delivery: Technical scoping · Business requirements gathering · Team coordination · Business workshops · Stakeholder management · Vendor management · Risk and deliverable tracking

Programming: Python · SQL · Java

EDUCATION

DIPLÔME D'INGÉNIEUR IN COMPUTER SCIENCE September 2021 – September 2024

Data Engineering and Artificial Intelligence (IDIA)

Polytech Nantes · Nantes Université, Nantes, France

- Five-year French engineering degree accredited by the Commission des Titres d'Ingénieur (CTI); recognised as Master's level (EQF level 7).
- Apprenticeship-based programme specialising in data engineering, artificial intelligence and software engineering.
- Design, delivery and operation of data-driven products and services.
- Industry placements completed at CETIH, then Airbus Atlantic.

DUT IN STATISTICS AND BUSINESS INTELLIGENCE (STID) September 2019 – June 2021

IUT de Metz · Université de Lorraine, Metz, France

- Two-year undergraduate diploma in applied statistics, programming, databases and business intelligence.
- Data analysis, preparation, modelling and visualisation.
- Design of reporting and decision-support tools.

LANGUAGES

French: native

English: professional working proficiency, experience in an English-speaking environment (Sweden)
